The DRP Low Drag Hub System

The Fastest Rolling Hubs Guaranteed.™

DRP HUB DEFENDER™ Bearing Spacers

Traditional wheel hub design doesn't allow precise bearing loading, making spindle nut tightening more of an art than a science. The result is either excessive bearing preload or end-play. Excessive bearing preload increases friction, slowing the hub while reducing performance and bearing life. Excessive end-play causes drag through wheel movement (toe) and uneven bearing loading.

Hub Defenders eliminate excessive end play or preload present in most wheel hubs, reducing friction while allowing the vehicle to roll faster and the bearings last longer.

Hub Defenders are spacers that go in between the inner and outer hub bearings, adjustable in length to fit each hub precisely. Precision machined from billet steel or aluminum. Includes a set screw to prevent the spacer from moving once set.

DRP Hub Defenders are easy to install and make an immediate difference you can feel. Prevents over tightening. Reduces Drag. Reduces Temperature. Simplifies maintenance. Increases performance.

Available for all popular racing applications.

If we don't have your application, we will custom build it for you!

DRP LOW DRAG Bearing Kits

Reduce friction and increase speed even further with our High Performance, Low Drag Bearing Kits.

We start with high quality, precision bearings and make the surfaces ultra smooth, while etching an isotopic pattern to hold the grease.

Temperature reductions of 100 degrees+ from stock bearings.

DRP Low Drag Bearing kits are available for almost any application and bearing style.

Can't find your listing? Send us your bearing numbers and we'll build a custom kit for you.

DRP LOW DRAG Hub Seals

Stock hub seals have incredible drag. We took care of that. DRP Ultra Low Drag (ULD) Hub Seals are custom built racing seals that incorporate a full PTFE sealing element and lightweight aluminum housing. DRP Air Gap (AG) Seals provide "air curtain" protection to the bearings with No Drag. DRP Zero Drag (ZD) Seals provide an additional level of bearing protection with virtually Zero drag. The right seal for you depends on your application and level of maintenance desired. All DRP low drag seals are reusable, saving time and money.

Available for most popular applications with custom seals

DRP LOW DRAG Wheel Bearing Grease

Who ever thought wheel bearing grease could be such as drag? Our Ultra Low Drag Wheel Bearing Grease from Kluber Lubrication is unlike any other and by far the best we've tested. For high speed wheel bearings only. Available in 390 gram cartridges, 100 gram cartridges and convenient 50 gram syringes. One syringe will pack approximately 16 bearings.

Tech Tip! Don't over-pack your wheel bearings. Only inject grease between every other bearing roller or approximately 50% full. Proper packing allows you to service hubs less often.

Low Drag Hub Kits

Save some time and order the best of all components in one kit. Includes Hub Defender, Low Drag Bearing Kit & Low Drag Hub Seal. Select your application and style of seal.

Don't see your application? Contact us for a custom kit.

Hub Defender™ Installation Tool

Get it right the first time!
Fast & accurate Hub Defender Set-Up. This tool measures the distance between your bearings and allows you to adjust your spacer to .001". Measure hub and set spacer in 90 seconds!

Pinion Defender™

Say goodbye to crush sleeves and shims. Our adjustable Pinion Bearing Spacers allow you to precisely set the pinion pre-load, reducing drag and improving rear end life. Available for most popular applications. Custom upon request.

Low Drag Rear End Bearing Kits

Our premium finished bearings and races available for your rear end. Pinion, Carrier and select axle bearings available.

Precision Bearing Packers

This tool makes packing your bearings fun! Inject grease between the rollers for a precise bearing pack, no wasted grease and no mess. Universal for most bearings.

Customer Feedback:

"I've been racing for over 30 years and have never had a car roll this free!"

"...the car would literally try to roll off if the ground wasn't level, it was that free!"

"These spacers are freaking awesome!"

"badass."

"Excellent product from DRP. We have them in our cars and will never again be without them."

"Incredible difference."
