**MAX SPEED. NO COMPROMISES.**

## Making Race Cars Consistently Fast is Hard.

The first 98% of speed is relatively simple.

The last 2% (the difference between winning and average) can be incredibly complex and expensive!

Our goal at DRP Performance is to design and build tools that make the last 2%:

- Less Complex to Understand
  - Easier to Find
  - More Consistent & Less Expensive.

The right information (*Data*) gives you more clarity and understanding of what your race car is doing. Clarity lowers stress and allows for better decisions to be made.

Data comes from good tools and processes. (*Equipment*)

Good training enables you to understand and make the best decisions with your data. (*Training*)

Bad decisions (Guessing, Gambling, Hoping) is what takes the most time and costs the most money!

*How we can help you find more speed and win more races:*

*Spring loads & platform are an essential component for set-up consistency and handling adjustment at the track.*

*Accu-Force Spring Smashers are the premium spring load machines on the market. Max Speed. No Compromises.*

*Wheel positions (toe, camber, caster, rear skew, tread width, etc.) are foundational to set-up success. Miss these and your day at the track will be a struggle. Real Square Tools save time and increase your accuracy. Max Speed. No Compromises.*

*Balance is the ultimate chassis tuning tool. Master it and you look like a hero. DRP set-up systems take your balance measurements to the next level in the shop. DRP data acquisition systems measure what you can't see at the track. Max Speed. No Compromises.*

*What good is all this information if you don't understand it or know how to properly use it? DRP University brings you on-line training, live seminars & workshops and personal set-up services.*
